THE QUICK-WIN PLAYBOOK

15 MINUTES / HOME BAKERS

1 Cost the actual recipe

List the quantity USED for each ingredient, not the full package price. Include fillings, frosting and decoration.

Action: Convert bulk-purchase costs into per-gram or per-unit costs.

2 Count non-food expenses

Add boxes, cake boards, electricity allowance, equipment wear and travel or delivery if offered.

Action: Include waste and special packaging.

3 Value your labour

Estimate baking, decorating, cleaning, messaging and handover time at a realistic internal hourly cost.

Action: Put a monetary value on every working hour.

4 Set the price carefully

Total costs ÷ (1 − target gross margin) gives a margin-based price before applicable taxes. Confirm the order details.

Action: Charge separately for extra design changes if agreed.

CHECK BEFORE YOU COMMIT

Confirm your inputs, write down your assumptions and review the result yourself. AI can draft text; it cannot verify missing facts.

TAKE-HOME WORKSHEET

Fill these six fields, then use the prompt to draft the customer-facing output.

Cake size / portions

Ingredients total

Packaging + overhead

Total prep/decor hours

Fully loaded order cost

Quoted price / deposit

COPY-AND-PASTE AI PROMPT

Turn my cake order notes into a clear customer quote. Use only my ingredient, labour, design and price inputs. Show cake size, flavour, decoration scope, collection/delivery terms, deposit and change policy. Flag missing information such as allergies or requested inscription. Never make unsupported allergy-safe claims.

WORKED MINI-EXAMPLE

Ingredients + packaging	€33
Labour: 4 × €18	€72
Utilities + equipment	€8
Price at 40% margin	**€113 ÷ 0.60 = €188.33**

WATCH OUT A cake is not profitable just because ingredients cost less than the selling price.
