THE QUICK-WIN PLAYBOOK

10 MINUTES / FOOD TRUCK OPERATORS

1 List fixed event costs

Include pitch fees, transport, staffing commitments, power, permits to verify and event-specific overhead.

Action: Count costs you incur even if sales are zero.

2 Calculate per-portion variable cost

Add ingredients, packaging, payment processing, expected waste and other costs that rise with portions sold.

Action: Use saleable portions, not recipe yield in perfect conditions.

3 Find contribution per sale

Selling price minus variable cost per portion equals contribution. This must be positive before break-even makes sense.

Action: €12 menu price − €5 variable cost = €7 contribution.

4 Check break-even volume

Divide fixed costs by contribution per portion and round UP to a whole portion. Compare with expected footfall and capacity.

Action: Add a safety buffer for uncertainty.

CHECK BEFORE YOU COMMIT

Confirm your inputs, write down your assumptions and review the result yourself. AI can draft text; it cannot verify missing facts.

TAKE-HOME WORKSHEET

Fill these six fields, then use the prompt to draft the customer-facing output.

Event + date

Total fixed event cost

Menu selling price

Variable cost per portion

Contribution per portion

Required portions / sales target

COPY-AND-PASTE AI PROMPT

Review my food-truck event economics using only the prices, portion cost, fixed fees and capacity I provide. Calculate contribution, break-even portions and three sales scenarios. Point out missing inputs such as transaction fees or waste. Do not invent attendance, sales forecasts or permit requirements.

WORKED MINI-EXAMPLE

Selling price	€12 per portion
Variable cost	€5 per portion
Fixed event costs	€500
Break-even volume	**ceil(€500 ÷ €7) = 72 portions**

WATCH OUT A fully booked event calendar can still lose money if pitch fees exceed contribution.
